Reason why I want to work in Japan: It is a great opportunity to work in Japan. I have two reasons to work in Japan.

Key Points:

First one is I have some friends who are working in Japan and they suggested that I should work in Japan.

Second one is I have work experience(PHP, Laravel framework) so that I can contribute my experience as well as gain experience from Japanese IT industry.

Description:

First reason is that one of my university juniors and one of my colleagues are working in Japanese IT company. So I asked them about Japanese IT industry. They both said that it is great. People are so friendly, the working environment is better and I can experience new technology from Japanese IT industry. They both suggested that I should work in Japan.

Second reason is that I have 2 years and 5 month experience in web development as well as software development in PHP and Laravel framework. I can contribute my working experience as well as want to gain experience from Japanese IT industry. I want to work in Japan for more than 10 years if I can. Another thing is I have an elder brother and sister to take care of my parents so I am free to explore Japanese IT industry.
